SUMMARY

AI Engineer with 2+ years of experience in Generative AI, multi-agent orchestration, and RAG pipelines, specializing in building scalable, production-ready solutions using Python, LangChain, and Azure OpenAI. Proven track record in enhancing chatbot systems, reducing false ticket creation by 70%, and implementing semantic routing and PII compliance. Strong expertise in prompt engineering, LLM integration, vector databases, and end-to-end GenAI application development

TECHNICAL SKILLS

- **Languages & Frameworks:** Core Java, Python, SQL, HTML, CSS, FastAPI, LangChain
- **Database:** MySQL
- **Tools:** Git, GitHub, Postman, VS Code, Jupyter
- **Cloud:** Azure OpenAI, Azure AI Search, Azure Function, Azure Storage, Azure Document Intelligence
- **Concepts:** Object-Oriented Programming, Prompt Engineering (Designing and optimizing AI prompts), Azure Basics, Azure Functions, Retrieval-Augmented Generation (RAG), Machine Learning (ML)

WORK EXPERIENCE

Genpact India Private Limited

Dec 2023 – Present

Client: Kroll

Project 1: Cora Agent Assist : AI-Powered Chatbot – Azure OpenAI & LangChain | Dec 2023– Present

- Improved RAG pipeline by optimizing document retrieval and context construction, resulting in better response accuracy
- Developed document ingestion pipeline to process PDF, DOCX, and PPTX files using Docling, including chunking and embedding generation
- Implemented Semantic Routing to handle common queries without LLM calls, reducing API costs and improving response time
- Designed and refined prompts to ensure structured, consistent, and accurate responses
- Integrated PII detection and anonymization using Presidio for secure and compliant data handling
- Debugged and resolved issues related to retrieval failures, incorrect responses, and missing context
- Technologies: Python, Azure OpenAI, Azure AI Search, LangChain, Presidio, Docling, Azure Functions

Project 2: Network Agentic Solution – AI-powered autonomous agent for network operations automation

- Designed a LangGraph agent with 9 tools (ping, traceroute, disk usage, ServiceNow etc.) that automatically selects the right tool based on user's natural language query
- Stored last 4 conversation messages in PostgreSQL to maintain chat context across multiple user sessions
- Built a regex-driven parser to clean and structure Ansible AWX logs into JSON format, enabling accurate LLM interpretation and reducing noise in agent decision-making
- Applied prompt engineering with few-shot prompting to design intelligent prompts for query-based tool selection, enabling dynamic network diagnostics and reducing false ServiceNow ticket creation by 70%
- Timeout issues by implementing sleep delays and retry logic (up to 3 attempts) for Ansible API calls, ensuring complete job execution before data retrieval
- Technologies & Tools: Python, Azure OpenAI, LangGraph, Ansible AWX, ServiceNow API, PostgreSQL

EDUCATION

• BE– Information Technology- VPKBIET, Baramati	Jun 2023	9.1 CGPA
• HSC- SPMM, Shardanagar	May 2019	75.69 %
• SSC- SPVN, Shardanagar	May 2017	93.00%

CERTIFICATIONS

Microsoft Azure AI-102 Certification (AI Engineer Associate)	Mar-2026
Microsoft Azure AI-900 Certification (AI Fundamentals)	Aug-2025
Mastering GenAI Course, Sunbeam Institution	Aug-2025
Python Novice to Pythonista, Percipio	Sept-2024
